

THE DOSE MAY
APPEAR HIGH
BUT LIKELY NOT A
REASON TO CALL

CONSIDER &
CALCULATE FIRST

Example of a 90 mg/kg/day prescription for acute otitis media

Child's WEIGHT (kilograms)	Child's WEIGHT (approx. pounds)	Typical AGE for Child of this Weight	Typical HIGH DOSE Amoxicillin Prescription If using 250 mg/5mL	Typical DURATION of Treatment
7	15	6 to 11 months	300 mg BID = 6 mL BID	10 days
9	20	12 to 23 months	400 mg BID = 8 mL BID	
14	30	2 to 3 year old	625 mg BID = 12.5 mL BID	5 days <small>(may be up to 10 days if recurrent infection, treatment failure or perforated ear drum)</small>
18	40	4 to 5 year old	800 mg BID = 16 mL BID	
23	50	6 to 7 year old	1000 mg BID = 20 mL BID	
27	60	8 to 9 year old	1200 mg BID = 24 mL BID	
Usual maximum dose is 3 g / day <small>CPS¹⁵ states up to 4g/day for pneumonia in children</small>				

- **Guidelines recommend high-dose amoxicillin for greater effectiveness in infections commonly caused by intermediate-resistant *Streptococcus pneumoniae*.**
- **High-dose amoxicillin is indicated for acute otitis media (BID x 5 to 10 days), and sometimes other infections, such as pneumonia (TID x 7 to 10 days).**
- **After completing a weight-based dose check on a pediatric prescription, the higher dose range may sometimes appear alarmingly 'adult-like', but is reasonable, effective and well-tolerated.**
